

Installing a TV above an ethanol fireplace*

When positioning an ethanol fireplace in combination with a TV screen** there's a few things to keep in mind.

Here are three possible solutions.

**Always check the specifications of the AV equipment being used to confirm suitability.

Refer to Mantel Surrounds in the Fireplace Manual

Solution 1

The TV needs a non-combustible mantel/ledge to act as a heat shield, or

Solution 2

the TV needs to be recessed in a niche 300 mm above fireplace opening, or

Solution 3

the TV needs to sit back off the level of the flame, and 300 mm above the fireplace opening.
